

Magnetic Whiteboard Assembly Instructions

1. Determine the overall whiteboard installation position according to the number of whiteboards purchased and the size of the installation site, and draw the positioning holes for the magnet installation.

2. Install the magnet plates on the wall according to the positioning hole

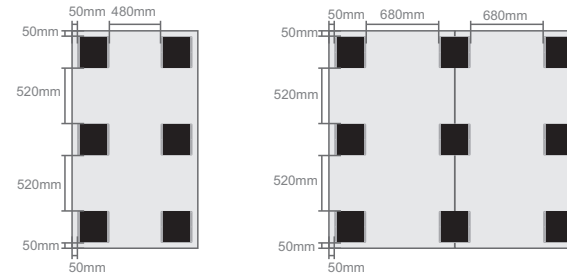

3. Use the suction cup to put the whiteboard on the wall in sequence.

⚠ Precautions

a. Installation methods of one whiteboard and two whiteboards
The installation steps are the same as the above three steps, and the magnet configuration is as follows

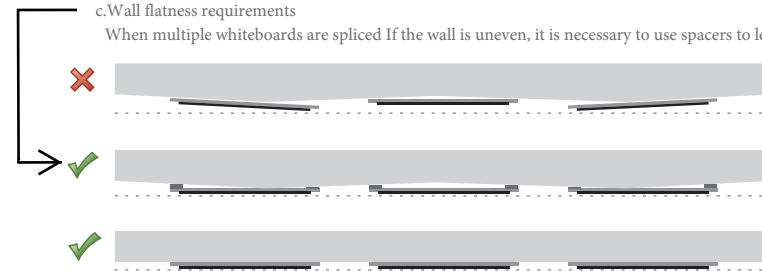

b. Wall bearing requirements

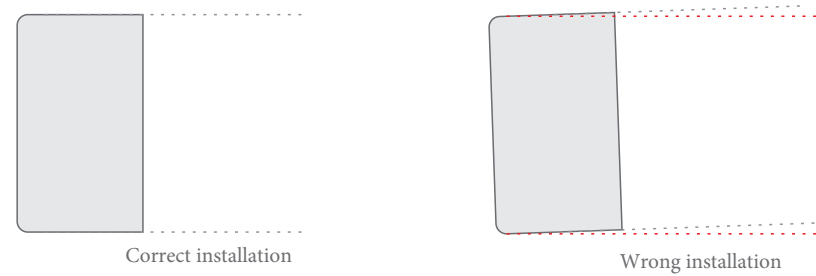

If the wall is not a solid concrete wall, please evaluate whether the wall can bear the weight of the magnetic whiteboard, so as not to cause the wall to fall.

c. Wall flatness requirements

When multiple whiteboards are spliced If the wall is uneven, it is necessary to use spacers to level the magnet when installing the magnet.

d. The first whiteboard must be level when installing

e. Whiteboards with chamfered corners can only be installed on both sides when splicing multiple whiteboards
